

IN THE SPECIFICATION:

Please replace the first paragraph on page 35 of the application with the following amended paragraph:

Similarly, the second lower support rail 134 has third and fourth lower support arms 140, 142 attached thereto, which are preferably interconnected with the second lower support rail 134 in a substantially perpendicular fashion, although other interconnection angles are contemplated. The third and fourth lower support arms 140, 142 have corresponding third and fourth fixed ends 141, 143, which are remotely disposed from the second lower support rail 134. That is, the third fixed end 141 of the first lower support arm ~~140~~ 136 is generally opposite the end which connects to the second lower support rail 134, and the fourth fixed end 143 of the fourth lower support arm 142 is generally opposite the end which connects to the second lower support rail 134. It is these third and fourth fixed ends 141, 143 of the respective third and fourth lower support arms 140, 142 that are interconnected with the base substrate 110 via the respective base anchors 116, 118. Thus, the third fixed end 141 of the third lower support arm 140 and the fourth fixed end 143 of the fourth lower support arm 142 are anchored to the base substrate 110 to substantially prohibit movement of the third fixed end 141 of the third lower support arm 140 and the fourth fixed end 143 of the fourth lower support arm 142.
